

DESCRIPTION

This is a replica PCB for the Commodore Magic Voice. Reverse-engineered schematics were used, as well as pictures of the top and bottom of the board.

Since the original Toshiba T6721A speech chip, and the LA05-124 chip are no longer available this board will only be useful for people with damaged pcb's or as the basis for adapting the design for another target platform (like say, Commodore V364/TED etc).
